

TEACHING GLASS BETTER

10th Anniversary of the
ICG Summer School

Edited by

Akira Takada, John Parker, Alicia Durán, Klaus Bange

ICG

International Commission on Glass

CONTENTS

PREFACE	9
1. INTRODUCTION	13
2. A HISTORY OF ICG SCHOOLS	17
2.1. Overview	17
2.2. Course origins	17
2.3. The venue	21
2.4. The teachers	22
2.5. The students	23
2.6. What we teach	25
2.7. Projects	35
2.8. Tutorials	39
2.9. Student questionnaires	40
2.10. Student participation	40
2.11. The creation of additional ICG Schools	40
2.12. Press releases	42
3. OPTICAL ABSORPTION	43
3.1. Introduction and history	43
3.2. Light absorption	44
3.3. Measuring absorption	45
3.4. De-excitation processes	46
3.5. Interpreting absorption spectra – peak positions	47
3.6. Interpreting absorption spectra – host effects	47
3.7. Consequences of different iron oxidation states for applications	48
3.8. Perceived Colour – colour coordinates	49
3.9. Optimising iron colour	49
3.10. Kinetics and cooling	50
3.11. Rare earth elements and optical properties	54
3.12. Defects	54
3.13. Colouring glasses by nanoparticles	55
3.14. Glass ceramics for optical devices	55
3.15. Periodic structures	56
4. DIFFRACTION AND X-RAY ABSORPTION SPECTROSCOPY	57
4.1. Introduction	57
4.2. Diffraction by non-crystalline materials	57
4.3. X-ray absorption spectroscopy	65

5.	LIGHT SCATTERING BY ATOMIC VIBRATIONS	83
5.1.	Introduction	83
5.2.	General considerations	84
5.3.	Linear response theory.....	87
5.4.	Microscopic theory of light scattering	90
5.5.	Raman Selection Rules.....	94
5.6.	Brillouin scattering in glasses	101
5.7.	Conclusion.....	102
6.	SOLID-STATE NUCLEAR MAGNETIC RESONANCE APPLIED TO GLASS SCIENCE.....	107
6.1.	Introduction	107
6.2.	The Music of Atoms.....	108
6.3.	Magic Angle Spinning.....	111
6.4.	Interactions in the Solid-State	113
6.5.	Two-dimensional NMR	119
6.6.	SSNMR of disordered materials.....	123
7.	ATOMISTIC SIMULATION.....	127
7.1.	Introduction	127
7.2.	Methodology of atomistic simulation	127
7.3.	Structure modeling	132
7.4.	Property prediction.....	137
7.5.	Future Directions.....	151
8.	THERMODYNAMICS OF GLASSES.....	153
8.1.	Introduction	153
8.2.	The language of phenomenological thermodynamics	154
8.3.	The glassy state	158
8.4.	Multi-component glasses	162
9.	CHEMICAL DURABILITY OF GLASSES	175
9.1.	Introduction	175
9.2.	Design and evaluation of corrosion tests	176
9.3.	Sub-surface layers	181
9.4.	Thermodynamic approach to the hydrolytic stability.....	186
9.5.	Rate equation.....	194
9.6.	Reaction path calculation and corrosion layers.....	197
10.	CHARACTERIZATION OF GLASS SURFACES.....	203
10.1.	Introduction	203
10.2.	Analysis of glass surfaces.....	204
10.3.	The industrial analytical approach	205
10.4.	Examples of problem-oriented surface analysis	209

11. CONTROLLED CRYSTALLIZATION OF GLASSES – FROM TRANSFORMATION KINETICS TO GLASS-CERAMICS	215
11.1. Introduction	215
11.2. Basic descriptions	215
11.3. Determination of kinetic parameters	222
11.4. Glass-ceramics.....	228
11.5. Perspectives.....	232
12. PHASE SEPARATION IN GLASSES.....	235
12.1. Introduction	235
12.2. Why do some compositions undergo phase separation? Thermodynamic explanation	236
12.3. Immiscibility in glass forming systems	244
12.4. Characterization of phase separation. Structural characterization tools	250
12.5. Summary of the general effect of phase separation on glass properties.....	250
12.6. Role of phase separation on crystallization.....	251
13. TRANSPORT PHENOMENA.....	253
13.1. Introduction	253
13.2. Calculation of D from experimental data	256
13.3. Factors affecting the value of D	258
13.4. Diffusing ion in ion exchange experiments.....	260
13.5. More than one ion diffusing	260
13.6. Mixed Alkali Effect	263
13.7. Ion exchange processing	264
13.8. More complex processes involving multicomponent diffusion	266
13.9. Fast ion conductors.....	269
14. ROOM TEMPERATURE MECHANICAL PROPERTIES OF OXIDE GLASSES.....	271
14.1. Introduction	271
14.2. Material properties and their measurement	273
14.3. Specimen properties and their measurement	276
14.4. Effect of glass composition	278
14.5. Strengthening techniques.....	280
15. HEAT TRANSFER PHENOMENA IN INDUSTRIAL GLASS MELTING AND DELIVERY PROCESSES	287
15.1. Introduction	287
15.2. Catalog of Heat Transfer and Affiliated Phenomena in Glassmaking	288
15.3. Heat Transfer in Melting Batch Layer.....	290
15.4. Heat Transfer in Glass Melt	297

16.	PRODUCTS MADE OF AND WITH GLASS	311
16.1.	Introduction	311
16.2.	Glass products today.....	312
16.3.	Modern and future glass applications	313
17.	INTRODUCTION TO TECHNOLOGY SESSIONS AND SUMMARY ON GLASS FABRICATION.....	323
17.1.	Scope of the technological sessions 2014, 2015, 2016, and 2017	323
17.2.	Snapshots of the glass fabrication program.....	324
18.	GLASS MELTING TECHNOLOGY.....	335
18.1.	Introduction	335
18.2.	Raw Materials	337
18.3.	Glass melting process steps	337
18.4.	Glass furnaces	343
18.5.	Refractories in glass furnaces	344
18.6.	Combustion processes, burners and NO _x formation in glass furnaces.....	345
18.7.	An important development in glass furnace technology is mathematical modelling...347	
18.8.	Furnace Control.....	350
18.9.	Energy efficiency of industrial glass melting.....	351
19.	GLASS SURFACES AND THIN FILMS ON GLASS	355
19.1.	Introduction	355
19.2.	Analytical techniques to characterize glass surfaces and thin film on glass.....	355
19.3.	The Glass Surfaces	361
19.4.	Thin Films on Glass.....	365
20.	NUMERICAL MODELING.....	369
20.1.	Introduction	369
20.2.	Application areas of numerical modeling.....	370
20.3.	Future Directions.....	374
A.	STUDENT QUESTIONNAIRE RESPONSES IN 2017	377
B.	PRESS RELEASES	381
C.	BIOGRAPHIES OF CONTRIBUTORS.....	399
